Subject: Installation of Oracle July Critical Patch Update on the downstream databases (ATLDSC and LHCBDSC)
Date: Wednesday, August 13, 2008 10:01:56

Hi All,

Following successful installation of Oracle July Critical Patch Update on test and validation databases, we would like to schedule installation of the patch on the downstream databases: ATLDSC and LHCBDSC. If there is no objections I would like to perform this operation on:

Thursday 14th August 14:30-16:30 CEST

Affected services: ATLAS conditions replication between ATLAS OFFLINE and Tier1 sites, LHCb conditions replication between LHCb OFFLINE and Tier1 sites and LFC replication between LHCb OFFLINE and Tier1 sites.

Although the intervention will be transparent and the database will be available during all the time, some delay on the replication may be observed.

Best Regards,
Eva
