

ArtdaqAdvancedOp < CENF < TWiki

To install a version of dune-artdaq, first log into either np04-srv-011, 012, 013 or 014 under your own username (not np04daq), and assuming the subdirectory you want to install dune-artdaq in is called "your_new_directory", do the following:

```
mkdir /nfs/sw/work_dirs/your_new_directory
cd /nfs/sw/work_dirs/your_new_directory
source ~np04daq/bin/web_proxy.sh
wget https://cdcvs.fnal.gov/redmine/projects/dune-artdaq/repository/revisions/develop/raw/tools/q
chmod +x quick-mrb-start.sh
./quick-mrb-start.sh --wib-installation-dir /nfs/sw/work_dirs/dune-artdaq-wib-dev/WIBSoft/ --uhal
```

This will install and build dune-artdaq from the head of its develop branch, as well as the released version of dune-raw-data which dune-artdaq depends on. If you'd prefer to have dune-raw-data from the head of its develop branch as well, add the argument `--dune-raw-data-develop-branch` to the `quick-mrb-start.sh` command above.
