NeutrinoCluster Choosing a location for the hardware

Choosing the Location of the Neutrino Cluster

The server class computers that are the baseline recommendations will require a rack. For a small installation with 7-10 servers, a half high rack should suffice. It's worth asking around if there are surplus racks available in your department or you campus.

The conderations that need to be made when choosing a location for your cluster are:

- Network connectivity
- Power and cooling
- Noise control
