Welcome to the Online Monitoring TWiki Home page

Introduction

The metrics of the Online Monitor are developed using developer branch of LArSoft. The detailed description can be access here:

<https://twiki.cern.ch/twiki/bin/view/CENF/DUNEProtSPOM>

Integration preparations

The integration tests will be performed on pddaq-gen05 machine on /daq/onlinemonitor/. The installation of the LArSoft will be on /eos/user/r/radescu with /eos/ being mounted on pddaq-gen05 server (which has no external network access). Currently the modules work with simulated data. The aim for M3 is to test the artDAQ output (as it will be for the real data) as an input to LArSoft. The output of LArSoft Online Monitor (root) to be propagated to the web tool for display.
