

# PHIN Photo-Injector Study

This site is to provide the effective information exchange between the team members and easy access to the procedures during the machine operation.

## Introduction

The laser driven RF photo-injectors are recent candidates for high-brightness, low-emittance electron sources. Within the framework of the second Joint Research Activity PHIN of the European CARE program, a new photo-injector for CTF3 drive beam has been designed and installed by collaboration between LAL, CCLRC and CERN.
