# Adding Examples to the EDAnalyzer Skeleton Code

Complete: ████████

Experts are encouraged to add examples of how to use their classes from within an EDAnalyzer. To add an example

1. Check out from CVS `FWCore/Skeletons`
2. Edit the files in `FWCore/Skeletons/scripts/mkTemplates/EDAnalyzer`
3. Contact a CVS administrator for this package (look at the `.admin/developers` file) so you can commit your changes

To add a new example line to the file just prefix the line with `@example_<label>` where `<label>` is the label you wish physicists to use when requesting your example be added to their analyzer. E.g.,

```
@example_track #include "FWCore/ParameterSet/interface/InputTag.h"
```

or

```
@example_track <use name=DataFormats/TrackReco>
```

If more than one example wishes to add the same line of code, then one can use multiple `<label>`s which are separated by an underscore, E.g.,

```
@example_track_muon #include "FWCore/ParameterSet/interface/InputTag.h"
```

When using multiple labels, the order of the labels does not matter.
