Agent Issues

- 235 - stability issues. It was down Sun-Wed and still not entirely stable!
 - ◆ crashed again! - Ivan is ticketing the IT guys.
 - ◆ Ticket: <https://cern.service-now.com/service-portal/view-incident.do?n=INC0539969>
 - ◆ It should be running now. There were problems with the host certs. Priorities were set wrong
 - ◆ Alison was working on autorestart from Condor. If it doesn't start we need to start it manually. Alison is working on it.
- 216 - upgraded
- 234 - now up and running
- We have nothing in drain, everything should be green
- All major agents are re-deployed except the high-prio machines

Site Issues

- RAL downtime tues
- KIT Monday downtime

Workflow Issues

- high priority stuff, formerly HighPrio Spring13 is getting pushed out of the way we need to keep an eye on the high prio stuff and keep it moving
- <http://spinoso.web.cern.ch/spinoso/mc/issues.html>

Redigi/ReReco

- The issues we had last week with WF's being "stuck" in acquired eventually worked their way through the system. The ACDCs weren't really "stuck" but were sitting behind higher priority WF's in the queue so weren't moving along.
- we managed to get ~150 WF's through, most of which needed some sort of special attention

Andrew's issues

- all log collect jobs failing at Fermilab, there is a GIT HUB issue already, with the new patch
 - ◆ Seangchan is trying to talk to Catlyn about it but Catlyn has been out sick all week
- For RelVal we just want to write to _DISK endpoint, when you make deletions delete both MSS and DISK
- For Pileup datasets we make duplicates. Put it in the comments

's questions

- Alan and Seangchan have new tag. We need to do upgrades once we get through the high-priority stuff
- Premixing, any progress on premixing test workflow? Ask Oli
