

## 3.1.0 PPS Update 44

**Release date: 16.02.2009**

### Preface

This update contains a new version of the cream CE fixing configuration issues and implementing the new proxy renewal mechanism.

It also contains a new version of yaim core fixing a series of bugs and including new configuration features.

There's also a new version of yaim clients only affecting the WN to be able to use the glite-wn-info command. Please check the release notes of each patch for more details.

Finally, it adds an update of the BDII in 64bit services (this is due to a mistake, the 32bit version is already in PPS since update 43).

### Mirroring

Changes have been committed in the following repository locations:
