

## DNA3.2.1 - Standardization, Integration and Interoperability Plan and Status Report

This document describes the standardization, integration and interoperability strategies and the relevant technical roadmaps defined by EMI in collaboration with external projects and initiatives. This plan is updated every 12 months to report on the implementation, changes and results of the original plan [month 24]

This is an update of DJRA1.5.2 (M12) [↗](#) and DJRA1.6.2 (M12) [↗](#)

### P1 external reviewers' report on D5.5.2 Standardization Work Plan and Status Report (M12)

This deliverable is an update of D5.5.1. It significantly extends that deliverable. It begins with a status update and continues with details of the project's participation in the OGF and SIENA. The status of standards adoption is then discussed from the unified EMI perspective. A highly detailed work plan shows how standards body participation will affect and benefit, at the objective level, each technical work area. Strategies for establishing and promoting new standards emerging from the work carried out in EMI, as well as enhancing existing standards of interest to EMI, are then discussed in great detail. It will be interesting to see if EMI can encourage an end-user-friendly SAML implementation/interface to be developed. The project should take specific measures to ensure the visibility of its contributions in the standardization processes.

### P1 external reviewers' report on D5.6.2 Integration Work Plan and Status Report (M12)

This deliverable is an update of the already comprehensive D5.6.1 and extends that deliverable in terms of moving the baseline forward. It begins with a status update and continues with details of the current state of the test bed. An updated work plan is then provided.
