

EGIagreementLargeScale < EMI < TWiki

"EGI periodically collects requirements from the user community and the operations community to foster innovation. These are provided to third-party software providers - including EMI - to ensure that the deployed technology meets the needs of these communities.

The partners providing the EGI requirements may participate in pre-release testing activities either with direct participation to testing, or with their own resources to make sure that the software developed meets their requirements, and to verify its usability and scalability in a production environment, as applicable. This activity is a voluntary relationship between EMI and the group involved and does not form any part of the software verification or validation activities undertaken by EGI in formally accepting the software from external technology providers.

The Chief Operations Officer and Chief Community Officer can be contacted by EMI and third party software when involvement of EGI partners is felt to be needed in testing activities. In any case requirements will be collected and tracked in a transparent way to ensure that the interested partners are recorded."
