L&B, v. 4.1.2

Affected Services

- affected services: L&B, WMS, UI, WN

What's new:

- This is a hot fix for issues caused by the previous release. It also adds missing man pages and updates existing ones, and fixes configuration and documentation files to explicitly control and explain purging of done jobs.
- For more details & Known Issues please read the Extended Release Notes [↗](#)

Installation & Configuration:

- The emi-lb metapackage is installed by yum.
- Configuration requires, at the very least, setting MYSQL_PASSWORD, SITE_NAME and SITE_EMAIL in the site-info.def file.
- Reconfiguration is required if you are updating. On Scientific Linux, you can (re)configure by YAIM.
- On Debian, use the glite-lb-setup command. Upgrading from previous versions of L&B (earlier than 4.0) involves a database schema change. A DB migration script is available. In typical scenarios it will be initiated automatically during reconfiguration. Follow documentation in case it needs to be started manually.

Known issues:

- There are missing dependencies on 32-bit platforms, which prevent L&B from installing successfully. They are glite-info-provider-service, bdii and glite-yaim-bdii. They have only been released with EMI-1 and can be obtained from the EMI-1 (or UMD-1) repository if installation on a 32-bit system is required.
- Although this update fixes issues related to restarting the L&B Harvester service upon update, the fix won't take effect until the next update. To make sure harvester restarts correctly, do either of the following:
 - ◆ Reconfigure by yaim after update
 - ◆ kill the old harvester daemon (glite-lb-harvester) before updating
 - ◆ Restart your machine after update
