# Current issues to be fixed/improved (ordered by priority) in the ETICS client:

- [SOLVED] "useradd not found" issue
- [SOLVED] "log4cpp.location" issue <-- the user removed the error from the config but anyway a patch has been added
- **Working support for multi-package component build**
- [SOLVED] Check the way RPMS are published (From ADM: "I think there is a problem in the way RPMS are published, in the sense that if mock fails and strictComplianceCheck is ON, no RPM at all should be published (wasn't that the policy for EMI 2?). However, at the moment the SRPM is not published, but if a binary RPM exist (not from mock) it is published. To be fixed, but this doesn't prevent building and the repo is always updated at every build, so this is not a showstopper, the right mock-generated RPMS will get there later.")
- [SOLVED] Apply policies changes for Debian\*
- [SOLVED] Other Debian issues (installation and dependencies. See GGUS tickets)\*
- [SOLVED] Create the binary tarball from the generated rpm/deb file\*
- **Show two different status for each component: one for the build phase and another one for the repackage phase**
