Hydra Client: Configuration

Introduction

The Hydra clients provide the access to the Hydra key stores and also some Data Management functionalities. The Hydra clients are typically NOT installed on the same machine as a Hydra service.

Installation

The Hydra clients are installed from the EMI repositories.

Install the EMI release package.

```
yum install yum-priorities yum-protectbase  
rpm -Uvh http://emisoft.web.cern.ch/emisoft/dist/EMI/2/sl6/x86_64/base/emi-release-2.0.0-1.sl6.no
```

The installation command is:

```
yum install emi-hydra-cli
```

In order to have access to the proxy generation clients the VOMS clients should be installed:

```
yum install voms-clients
```
