

## Deployment Feedback Form

Please fill fields in the tables below by clicking on **EDIT** button on each of the following tables, then save once done.

### General Data

Site Name:	NGI_PL, UWAR (PL-Grid)
Site Administrator:	rkluszczyński (at) mat.umk.pl
Service Deployed	UNICORE TSI 6.4.0
Service Instance Details (hostname, OS, HW)	Centos 5.5, 64-bit

### Deployment Report

Comment on the release notes	OK
Comment on System Administrator Documentation:	Description should also contain information about setup option prepared /etc/init.d/unicore-tsi script, helping in configuration installation based on rpms.
Comment on the installation process (Warnings, Missing repositories/dependencies):	No missing repositories/dependencies.
Comment on the (re)-configuration with YAIM (Issues/Warnings/Errors found when configuring, services which should be restarted, etc.)	N/A
Comment about the functionality of the service - Refer to the Service Reference Card in the Documentation (- Have the daemons started/restarted OK - Does it pass minimal functionality tests - Any problem about normal production usage to report? )	SRC is OK: - daemon starts/stops/restarts without any problems, - functionality checked in case of Torque BSS which works without problems, - in production no problems observed.
Any other comment or suggestion for improvement	In case of using setup option of /etc/init.d/unicore-tsi script, symbolic link in /etc/unicore/tsi to tsi.properties file should be updated and points to a file inside new tsi directory (default is /usr/share/unicore/tsi_selected). In our installation after setup, symbolic link /etc/unicore/tsi/tsi.properties was pointing to old directory /usr/share/unicore/tsi).
