### Future Circular Collider

Future Circular Collider (FCC) is a feasibility and design project for a new, particle-collider based research infrastructure. Understanding the origins of matter, energy and the inner working of the universe is a "science mission" for the 21st century. This mission is best addressed with an integrated research programme of a highest luminosity electron-positron particle collider that is superseded by an energy frontier hadron collider. This wiki site collects and presents all information that is relevant for the members of the international collaboration that carries this ambitious mission to efficiently carry out their work.
