

## Doxygen Documentation

To find information about the different processors you can use the documentation which can be generated with doxygen. To limit the number of documented classes listed on the page, each subproject (digitisation, reconstruction, analysis etc.) has its own doc directory.

To generate the documentation, go to the doc directory where the `Doxyfile` resides. Now call `doxygen`, which generates a `html` subdirectory. With your preferred browser you can now open the `index.html` inside this directory.

To generate the documentation for the reconstruction processors for instance:

```
tpcuser:~/MarlinTPC_trunk> cd reconstruction/doc
tpcuser:~/MarlinTPC_trunk/reconstruction/doc> doxygen
tpcuser:~/MarlinTPC_trunk/reconstruction/doc> firefox file:///home/tpcuser/MarlinTPC_trunk/recons
```

Now use the *classes* tab to get a list of all the processors and helper classes in the reconstruction section.
