

Configuration variables for LFC

These are the variables necessary to set for the configuration of LFC service.

Example file coming in `/opt/glite/yaim/examples/siteinfo/services`. Please, remember to move this file into your appropriate `siteinfo` directory where you store the YAIM configuration. For more details please check The configuration variables section in the YAIM guide.

The optional variables which are coming with default values are set in `/opt/glite/yaim/defaults/node-type.pre(post)`. Their value can be reset in your `site-info.def` file if necessary.

- **Mandatory variables:** sys admins must ensure these variables are properly defined according to the features of the site.

Variable Name	Description	Value type	Version
---------------	-------------	------------	---------

- **Optional variables:** sys admins don't need to change the value of these variables since YAIM provides a suitable default value.

| Variable Name | Description | Value type | Default Value | Version |
