Cheking services on the Slave Node

How to check if MASTER (`lcg-sft.cern.ch`, by default `lxb2089`) works correctly?

- Check if the report is available at: <https://lxb2089.cern.ch:9443/sft/lastreport.cgi>
- Check if the report contains reasonably new results (not many red numbers in first column)
Note: Outdated results may also be a result of broken sft2 submission cron job on `lxplus` or broken MASTER
- Check if links to the test details work (html files in `/opt/lcg/sft/web/info` directory)
- Check if the metric view for last week shows the fresh results
