Korea Central Identity Provider: KREO involved with this

EduGAIN for web services

WebFTS is prototype SSO enabled WLCG web service - active for several years now. SAML credentials translated to x509. Deployment of this solution must be done per service, not optimal.

Some funding under AARC2 for something more central, easier way, CERN IT for web and hopefully non-web to benefit from EduGAIN

A: Mostly affects devs for main frame for LHC VOs, they're the ones that need to introduce this

Dave K: Indico, nice if you could just log in ...

Ian: that one you already can.

Matthias: How about wiki areas? Site staff are meant to edit it can't if you're not a CERN user

Hannah: Need to look at this

[Discussion]

Hannah: Other key services? Protocol is SAML, not aware of anything that doesn't use a browser, not ideal.

DG: Proxy token translation service allows non-web access. EGI using.

Workload Management Trends in WLCG (Maarten Litmaath)
