

## Upgrading dCache 1.7 to dCache 1.8

*Greig Cowan*

The procedure for upgrading is basically the same as for any other dCache [upgrade](#). Just upgrade the rpms from the dCache website (not sure if there is a CCRC-specific repository yet) and then run the install.sh script (either manually or via YAIM). A subsequent step requires you to migrate to the new version of the SpaceManager schema BEFORE starting the SRM:

<http://trac.dcache.org/trac.cgi/wiki/SpaceManagerchemaMigration>

If you then want to turn on space management and set up the spaces, you need to run through some additional steps.

<http://www.dcache.org/manuals/Book/config/cf-srm-space.shtml>

(unfortunately, some of this documentation needs updating)

*Mattias Wadenstein* We also recommend the new metadata repository on the pools, our experience with that has been good at NDGF. Especially pool startup times have been greatly improved.

### **dCache for CCRC08**

The dCache 1.8 version recommended for CCCRC08 is [here](#)
