# LCGSCM Monitoring, Logging & Reporting Status

- SAM UnAvailabilities : SAMProdServUnavail

## 29 April 2009

- Ongoing work to get latest MoU pledges into a DB for use by the other monitoring applications. Updating with latest numbers post RRB

## 15 October 2008

Nothing

## 17 September 2008

- Regular (intermittent) failures of messaging brokers during the night. investigating. Hampered by a bug which makes recovery take a long time. Effect is missing OSG tests (due to the 2 hour Gridview timeout) - will need resummation.
- CMS will set up an elog service on their vobox. We will provide expertise in the quattor and elog configuration for them.
- SAM running ok (last outage 9th Sept)

## 9 July 2008

- Tue 2nd July - CERN network problem prevented SAM BDII reading site BDIIs (1 hour )
- Wed 3rd July - All services in an 'ERROR' status due to host-cert tests failing - package missing on SAM UI
- Some results corrected for June in Gridview (22-23, 6th) for outages. New general procedure being put in place to 'mask' results

## 25 June 2008

- SAM - CERN hit limit of 100 nodes over weekend which stopped gstat tests working.
- DB issues in GV to be covered in meeting with DB Devs.
- Deployed new messaging based gridftp producers on all CERN disk servers. Testing message based L&B reporting system. Will be send to certification in next days. When deployed outside of CERN we'll turn off R-GMA and WS based publication at same time. \* monb001 - R-GMA box to be shut off.

## 30 Apr 2008

- SAM - DB intervention yesterday (Tue) to fix some tables in GV schema which had problem last time. All went ok - SAM turned off for 2 test submission cycles (2hours)
- elog - moved from VM to a 'real' machine for duration of CCRC'08 phase 2

## 19 Mar 2008

- SAM - downtime Friday lunchtime - Monday
  - ◆ Due to bad config + human error (didn't check)

- Gridview
  - ◆ FTS stats for CERN in pre-prod - [http://gvdev.cern.ch/GRIDVIEW/fts\\_index.php](http://gvdev.cern.ch/GRIDVIEW/fts_index.php)
- Both:
  - ◆ DB want some space back. Short term - delete some CLOBs - ~150GB ?
  - ◆ Mid-term - produce policy on data expiration and approval by MB
  - ◆ Finally - move to solution where we purge daily/monthly the data from the schemas

## 27 Feb 2008

- SAM UI upgrade still ongoing - SAM tests running at 50% frequency
- Problem with SAM SRM Tests - weren't run for 3 days (they had been scheduled only on the SAM UI which was out of service)

## 13 Feb 2008

- Final gridview services moved to new hardware. Old machines will be returned next week.
- Gridview/SAM will need a downtime to cleanup the old entries in the table. Advantage of using the downtime is we can partition for the future.

## Old Reports
