

## Error

The LFC daemon crashes regularly with Oracle 10gR2 database backend.

What can I do ?

---

## Solution

You have to use the 10gR2 Oracle Instant Client, instead of the 10gR1 one.

Remember to change `$ORACLE_HOME` in `/etc/sysconfig/lfcdaemon` to point to the right directory.

And restart the service :

```
$ service lfcdaemon restart
```

---

## It doesn't help ?

Get a core dump, by uncommenting the following line in `/etc/sysconfig/lfcdaemon` :

```
#ALLOW_COREDUMP="yes"
```

And restarting the service :

```
$ service lfcdaemon restart
```

The core dump will appear under `/home/lfcmgr/lfc`.

Put the core dump in a public location, and send this location to [helpdesk@ggusNOSPAMPLEASE.org](mailto:helpdesk@ggusNOSPAMPLEASE.org) (remove the NOSPAM!) : your ROC will help you, and contact the appropriate experts if needed.
