LFC upgrade to >= 1.6.0

Below, all the steps needed to upgrade the LFC from version < 1.6.0 to version >= 1.6.0.

Stop all daemons

- `service lfc-dli stop`
- `service lfcdaemon stop`

Install the new RPMs

All of them, on the appropriate node(s):

- `LFC-server`
- `LFC-client`

Run the migration script

A database schema change is needed to upgrade the LFC to a version >= 1.6.0.

Example for a Mysql LFC

`cd /opt/lcg/share/LFC/lfc-support-1.6.0/`

`mysql -u lfc_user -p lfc_password --database cns_db < migrate-mysql-schema-to-3-0-0.sql`

ATTENTION another name than "cns_db" can be used by sites... YAIM should use `--database $LFC_DB` !!!

Example for an Oracle LFC

`cd /opt/lcg/share/LFC/lfc-support-1.6.0/`

`sqlplus lfc_user/lfc_password@lfc_oracle_db < migrate-oracle-schema-to-3-0-0.sql`

Restart the daemons

- `service lfcdaemon start`
- `service lfc-dli start` on all the disk servers
