Status of the pilot service (by VOs and sites)

progresses on tasks

- status of the Pilot (phase1)

The status of the subtasks of TASK:7143 [↗](#) was reviewed

Notes:

- TASK:7121 [↗](#) : done
- TASK:7139 [↗](#) : updated with request to configure VO SW dir (see later among CMS comments)
- TASK:7140 [↗](#) : done. a new TASK:7274 [↗](#) was opened for 3 weeks of service management
- TASK:7153 [↗](#) TASK:7144 [↗](#): waiting on SAM installation for PPS to be completed: currently bdi2oracle and publishing webservice are missing. TASK:7275 [↗](#) is created for that
- TASK:

Initial planning of phase2

Massimo pointed out that a better version of the ICE-enabled WMS is currently in phase of pre-certification (PATCH:1841 [↗](#)). JRA1 would prefer this one to be the version used for phase 2. The ICE-enabled WMS we have now works, but it suffers for a number of bugs and would not sustain stress testing very well.

Furthermore Sara is preparing a new version of the yaim function to fix the problem found during phase one with glxexec

An update from Massimo was received after the meeting

Subject: Re: A clarification on CREAM installation procedure: the glexec issue

Sara has fixed the yaim installation procedure
(the new one is implemented by glite-yaim-cream-ce-4.0.4-10).
You can check this patch:
