

LCG Grid Deployment - gLite Pre Production Services - Pre Production Coordination - PPS Current Programs

APT and YUM repositories

PPS main repository is hosted at PPS-CNAF since the early dates of PPS activity.

The purpose of having a separate repository from the one provided by SA3 is to shield the vast majority of PPS sites against possible corrupted rpms erroneously released during the certification phase.

The repository at CNAF is synchronised with the SA3 one after the pre-deployment testing is successfully carried out.

People at CNAF take also active part in the pre-deployment testing by running a preliminary consistency check on the SA3 repository.

Details about how to use of the APT repository to install a PPS site in the PPS private wiki [↗](#)
