

PreStagingTestsChimera < LCG < TWiki

Thu, 19 Mar 2009:

Mattias Wadenstein: managed to upgrade and srm.ndgf.org is now back with a chimera namespace backend. Things seem to look good too. They recommend going through the entire procedure on: <http://trac.dcache.org/projects/dcache/wiki/pnfsDump2MigratePnfs2Chimera>

From dCache Tier1 meeting of Apr. 21 2009:

Jon reported that Fermi have no plans to migrate in the next two years.

Gerd: DESY should coordinate migration, as has happened in the past.

Lionel reminded people that the experiments will be testing sites in May and the beginning of June. They were hoping to test sites with Chimera deployed; however, IN2P3 will not be ready for this.

Marc reported that PIC are still testing Chimera, so cannot give any date. This will depend on getting Enstore to run with Chimera.

Doris reported the same for FZK: still testing and cannot give any planned date for migration.

Simon reported that TRIUMF are still testing. They have no plans to migrate.

The testing period should finish by early July. This should give us a window of between early July and September for any site that wishes to migrate to do so before the start of data-taking.

It looks like IN2P3 will be the only Tier-1 (other than NDGF) that may choose to migrate before September.
