

PreStagingTestsDesiredTotalRequestTime < LCG < TWiki

From the specs:

- l) If desiredTotalRequestTime is unspecified, the request may be retried for a duration, which is dependent on the SRM, in case transient error occurs.
- m) If input parameter desiredTotalRequestTime is 0 (zero), each file request must be tried at least once. Negative value must be invalid.

which is in contradiction with what stated in the Wiki (Assumptions):

The value of desiredTotalRequestTime **MUST** be zero or positive. If desiredTotalRequestTime is 0 it indicates the site defined default time.

Not clear what to do when it's zero.
