

VOMS configuration update effective Jan 9th 2007 due to new hostcert of voms.cern.ch

Due to the change of the CERN CA the new certificate DNs of all users and hosts look completely different and the site-info.def files must be updated. In order to propagate the changes in the site-info.def file the reconfiguration of gLite WMS, and UI nodes is necessary and on lcg-RB node the `run_function <site-info.def> <host-name> config_vomses` command should be run.

This was announced in https://twiki.cern.ch/twiki/bin/view/LCG/LcgScmStatusAas#November_29th

Site admins are advised to adopt the update in order to warnings the users will be seeing when trying to obtain a voms-proxy and their vomses files contain the old DN of voms.cern.ch. No service interruption will occur because lcg-voms.cern.ch is an exact replica of voms.cern.ch, since October 16th, and is always contacted when to satisfy voms-proxy-init's.

Example VO entry:

```
VO_DTEAM_SW_DIR=$VO_SW_DIR/dteam
VO_DTEAM_DEFAULT_SE=$CLASSIC_HOST
VO_DTEAM_STORAGE_DIR=$CLASSIC_STORAGE_DIR/dteam
VO_DTEAM_QUEUES="dteam"
VO_DTEAM_VOMS_SERVERS='vomss://voms.cern.ch:8443/voms/dteam?/dteam/'
VO_DTEAM_VOMSES="'dteam lcg-voms.cern.ch 15004 /C=CH/O=CERN/OU=GRID/CN=host/lcg-voms.cern.ch dteam'
```

Example VO definition part of the site-info.def file looks like:

```
...
...
# YAIM example site configuration file - adapt it to your site!
# Skipped all lines unrelated to the VO definition

# VO specific settings. For help see: https://lcg-sft.cern.ch/yaimtool/yaimtool.py
VO_ATLAS_SW_DIR=$VO_SW_DIR/atlas

VO_OPS_DEFAULT_SE=$CLASSIC_HOST
VO_OPS_STORAGE_DIR=$CLASSIC_STORAGE_DIR/ops
VO_OPS_QUEUES="ops"
VO_OPS_VOMS_SERVERS="vomss://voms.cern.ch:8443/voms/ops?/ops/"
VO_OPS_VOMSES="'ops lcg-voms.cern.ch 15009 /C=CH/O=CERN/OU=GRID/CN=host/lcg-voms.cern.ch ops' 'ops'

# Blank is mandatory
GRIDMAP_AUTH=" "
```

This is how the resulting vomses files should look:

- http://dimou.web.cern.ch/dimou/lcg/voms/vomses_2007_1file_per_VO (old and new voms.cern.ch cert. present. One of them is valid at any point in time.)
- http://dimou.web.cern.ch/dimou/lcg/voms/vomses_2007

As long as both voms.cern.ch DNs are present in the vomses files the one of them which is no more or not yet valid will give the following error as an answer to voms-proxy-init:

```
Enter GRID pass phrase:
Creating temporary proxy ..... Done
Contacting voms.cern.ch:15004 [/DC=ch/DC=cern/OU=computers/CN=voms.cern.ch] "dteam" Failed

Error: Could not establish authenticated connection with the server.
GSS Major Status: Unexpected Gatekeeper or Service Name
GSS Minor Status Error Chain:

an unknown error occurred
```

This is harmless because the next server is tried anyway.
