

# Review of the EGEE/WLCG, NDGF and OSG Critical Probes used for Availability Metrics Calculations

## EGEE/WLCG Critical probes

This is the list of critical probes used for Availability and Reliability calculations in EGEE/WLCG sites.

## NDGF Critical probes

This is the list of critical probes used for Availability and Reliability calculations in NDGF sites.

## OSG Critical probes

This is the list of critical probes used for Availability and Reliability calculations in OSG sites.

## SAM tests that raise alarms in the EGEE central dashboards

This is the list of SAM critical tests used to generate alarms to the COD dashboard.

## Calculation of Availability and Reliability Metrics

The periodical calculation of availability and reliability metrics for EGEE/WLCG, OSG and NDGF sites is performed by GridView following the Service Availability Computation Algorithm approved by the LCG Management Board in 2007.
