Fourth Generation Model - YR2 calculations.

- Higgs production and decay in the fourth generation model with SM-like couplings.
- $M_{D4}=M_{L4}=600\text{GeV}$ and $M_{U4} - M_{D4} = [1 + 1/5*\ln(M_H/115)] * 50 \text{ GeV}$).
- Assumes the same NNLO QCD corrections as SM for ggF.
- QCD scale and PDF+ α_s uncertainties are assumed to be the same as SM for ggF, i.e. +-15-20%.
- Old SM4 numbers with no EW radiative corrections.

NLO EW radiative corrections in the fourth generation model

- The NLO electroweak (EW) radiative corrections in the fourth generation model have been calculated recently for gg H production (arXiv:1108.2025) and for Higgs decay in WW/ZZ 4f (Prophecy4f version 2.0).
- The NLO EW radiative corrections for Higgs production via heavy-quark loop in gg H are positive for a light Higgs boson, being +12% at MH=120GeV with current (see figure) parameter setting. Corrections are relatively small around the ttbar-threshold, start to become negative at 450GeV, to become huge and negative towards the heavy-fermion threshold, but still remains -13% at MH=600GeV. If one assumes QCD/EW factorization this is, practically, the whole effect. Note here the breakdown of perturbation theory, i.e. 50% means that 3-loop corrections are not negligible.
- The NLO EW radiative corrections in Higgs boson decay-width for H WW/ZZ 4f turned out to be very large and negative, -70% for MH>2MW, because the BR's are completely dominated by H WW and to a lesser extent by H ZZ. Since H WW/ZZ receive almost the same large corrections, the BR's are not modified much for large MH. Once MH>2Mtop it is expected that the BR for H tt gets enhanced because of the large negative corrections to H WW/ZZ. One should note that the corrections from SM4 NLO EW are huge for H with presence of heavy-quarks and W gauge boson in the loop. Therefore Higgs decay in H bb, are also expected to play the key role at low Higgs mass exclusion.
- (Comments by G. Passarino, S. Dittmaier, compiled by R.Tanaka, Nov., 2011.)

Figure 1: (left) NLO EW correction to the ggF Higgs production in SM4. (right) Ratio of BR in SM4/SM calculated with Prophecy4f and HDECAY .

ggF Higgs cross sections

The entries are:

- Higgs mass (in GeV)
- SM4 ggF cross section
