

To start working on the new SVN repo:

1.- checkout `svn+ssh://svn.cern.ch/repos/dirac/trunk`

that'll get you the DIRAC dev root

2.- Once you've checked out that, you need to "build" the /scripts directory. To do so, execute

```
/DIRAC/Core/scripts/dirac-deploy-scripts.py
```

3.- There's still no auto script to build the binaries for you so you'll have to copy the binaries you've got compiled from the previous CVS installation. On my mac I copied the Darwin\_i386\_10.5 I had in the CVS dev area to the SVN dev area. Linux platform should be something similar to Linux\_i686\_glibc-2.

You're ready to go!

P.S. For more info check DIRAC SVN
