Check QM Tests

Procedure

First setup the package following prescriptions in this page. Then go to your package's cmt directory and run

```
cmt TestPackage
```

For running a single test (assuming it is in `mypackage.qms/test_group1.qms/a_test.qmt`):

```
cmt TestPackage mypackage.test_group1.a_test
```

Create a new reference file

For creating a new reference file, check the qmtest for the option file that is run, and the reference file that is there considered. Then run a gaudi job with the relevant options and substitute the reference file accordingly

```
gaudirun.py option1.py option2.py | tee reference.ref
```
