Variables not available on MicroDST

This page collects the variables that can not obtain from MicroDST yet, please add the variable name (as you call it), a short description, and how you get it with DaVinci e.g., link to the codes. If such variable depends on the running condition, please also explain it in the Comment.

Variable name	Short description	How you get it with DaVinci	Responsible	Comment
---------------	-------------------	-----------------------------	-------------	---------

TR: My favourites: value and errors on decay length / lifetime of signal and intermediate resonances, impact parameter and errors. Ideally, any cut value used in the stripping, since there is no guarantee that a future DaVinci release will give back the same values as used in the stripping process.
