# Grid Computing Shifters Checklist

This twiki shall provide a guideline for shifters on what kind of services need to be checked during a offline production shift

## Introduction

This twiki shall be useful for production shifters, especially if doing the first couple of shifts. It provides a list of tools that should be used for doing production shifts and gives hints on what to check for with those. The order of tools is not by logical workflows but by different tools and what can be checked with those.

We recommend to go through this checklist approximately every hour or at least every second hour.

1. Dirac monitoring
  1. Anonymous shifter plots
  2. Job plots
2. SLS
3. Dashboard
