

GETTING STARTED WITH VETRA v3r1 FOR ACDC DATA ANALYSIS

run the installation script

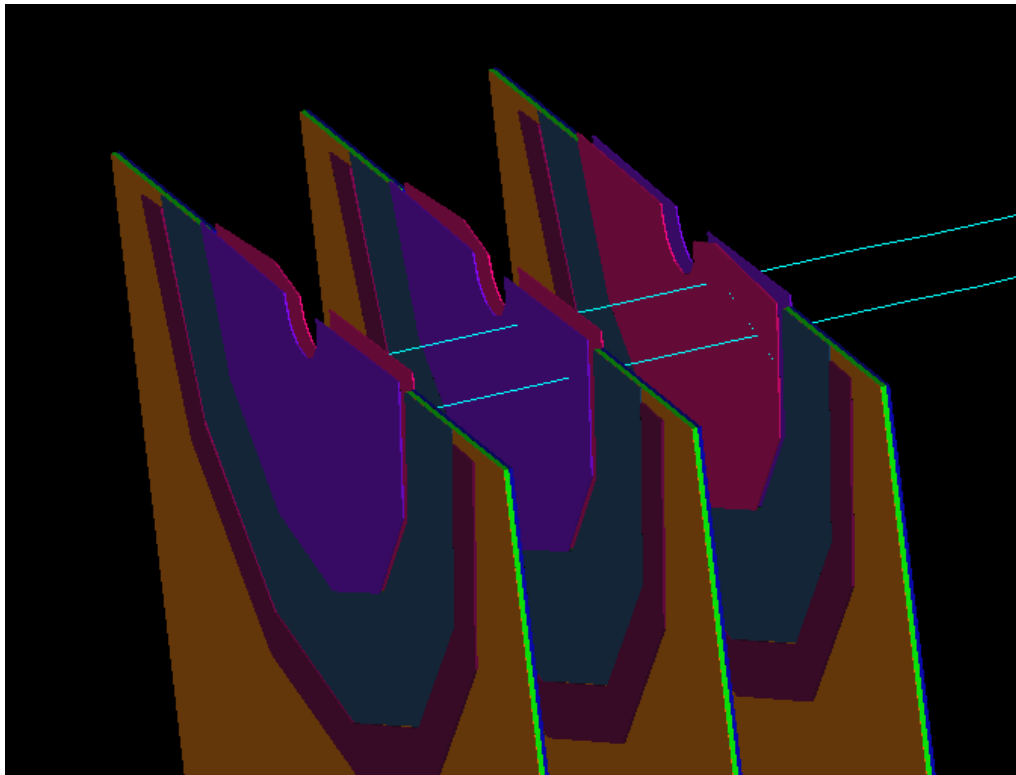

```
source ~/lhcbvelo/scripts/startACDC.csh <myACDCInstallation>  
runVetra.csh <acdc> <cc> <file> (z)
```

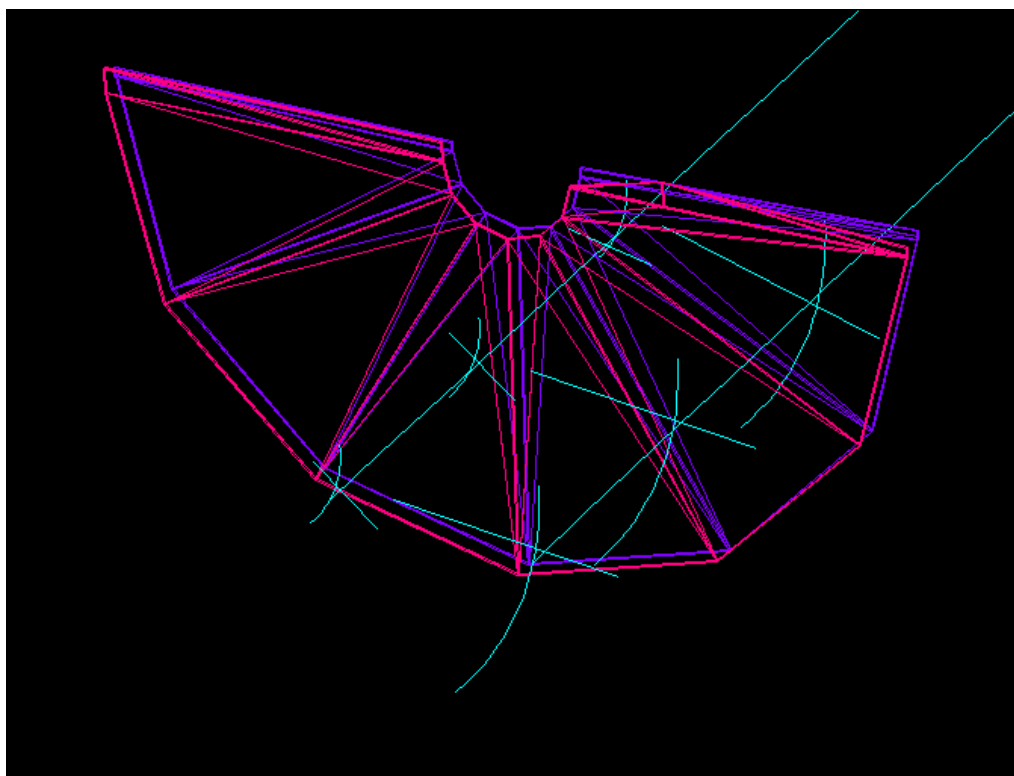

where *acdc* is either ACDC2 or ACDC3. *cc* is cable configuration HP1, HP2 or HP3. *file* is the raw data file. (z) is an optional argument for running just over the zero-suppressed banks.

Also try

```
runPanoramix.csh <acdc> <cc> <file>
```

This should allow you to produce pictures like this (ACDC2. Run 1344 Event 135) :
