ARC/ARC-T2/ARC_MCORE queues and associations to sites

Introduction

Jobs failing with site issue in the ND cloud: Reporting of site issues at ARC or ARC-T2 or ARC_MCORE queues is not straightforward because several different sites use the queues. A way to find which site to report is to look into failed jobs details at the computingElement (where the job really ran). Here is the list of computing elements and their assignment to sites ([link](#) gives you list of jobs at given computingElement in the last 12 hours). So, when you spot site related issue in the ND cloud, check if other jobs are failing at given computing element too and ticket the appropriate site. In case you will find some missing informations, please contact ADCoS Coordinators.
