Updating ATLAS Software Release and Tier0 Software

Introduction

In this page steps needed to apply changes to ATLAS production software release, e.g. updating xAOD content, are described.

General instructions (from Thijs Cornelissen, forwarded by Tomas Sykora)

Each time you want to change the xAOD content, you will need to clear this with the data preparation management. If you request all tags in one step then you need to ask for approval only once, so that should be easier. When you send the request with the tags, please include a description of the changes, and include the coordinators (reco, software, data preparation) in cc. We will then wait for their answer before collecting the tags.
