

Change the output format of the MessageSvc

If you need to format the output of the athena msg service add this to your jobO:

```
MessageSvc.Format = "% F%30W%S%7W%R%T %0W%M"
```

where the

```
F%30
```

specifies the width of the first column aso. This way you can make the first column wider so that you can read the whole name of an algorithm/algtool and not just the first few letters ...

Increase the message limit

If you get the following message but

```
ttbar  DEBUG Message limit reached for ttbar. Suppressing further output.
```

and you need to see the suppressed lines as well, insert the following line into your jobO file:

```
MessageSvc.defaultLimit = 9999999 # all messages
```
