

Analysis Tools: how to prevent DQM stuff to end up in PAT?

- discussion with several people.
- ANSWER: it seems to depend on the end user, who has to do the correct thing
- ANSWER: put this to the job which copies over from /store/group to /store/results
- ACTION ON Liz to follow this
- Liz talked to Eric: python fragment needed to remove the dqm stuff in the store/result job has been communicated and tested (drop in input). Eric happy with the solution for Crab. To be followed: if this really goes in the production code (ACTION on Sal/Benedikt/Dave/Simon)

---

I've checked a patch into the ProdAgent CVS HEAD. Manuel should apply this patch to the current instances of StoreResults and this should appear in the next PA release (SR is a special case of PA).

We'll think about whether we can do this in CRAB 3 as well. Currently not (without yet another config variable) because CRAB is used for DQM harvesting.

---

Make sure we do FWLite
