New Features and Enhancements of TWiki Release 4.2

- **Easier Installation and Upgrade**
 - ◆ New Internal Admin Login feature
 - ◆ The `Main.TWikiUsers` topic is no longer distributed as a default topic in Main web
 - ◆ A new directory `working` which per default is located in the TWiki root which contains `registration_approvals`, `tmp`, and `work_areas`
 - ◆ Configure can now authenticate when connecting to local plugins repository.
- **Usability Enhancements**
 - ◆ New WYSIWYG editor based on TinyMCE replaces the Kupu based editor
 - ◆ New "Restore topic" feature has been added to the *More Topic Actions* menu to easily restore an older version of a topic
- **Application Platform Enhancements**
 - ◆ Enhancements to IF: `allows`, `ingroup`, `istopic`, and `isweb`
- **Search Enhancements**

- ◆ New `query` search mode supports SQL-style queries over form fields and other meta-data
- **Skins and Templates Enhancements**
 - ◆ The PatternSkin which is the default skin for TWiki has got a face lift
 - ◆ The default templates have been heavily refactored to make it easier to create skins reusing the default skin.
- **Miscellaneous Feature Enhancements**
 - ◆ Many new functions in the API for plugin developers
 - ◆ Table of Content (TOC) feature enhanced
 - ◆ re-architected Pluggable user mapping (between login name and WikiName) to integrate with alternative authentication and Management schemes
 - ◆ Topic based User management has been extracted into a separately update-able package (TWikiUsersContrib)
- **Enhancements of Pre-installed Plugins**
 - ◆ CommentPlugin: New `templatetopic` parameter to point to custom comment template topic
 - ◆ EditTablePlugin: Move and delete rows
 - ◆ MailerContrib: Allow Exclusion Of Webs
 - ◆ SpreadsheetPlugin: 6 new math formulas; formula to format time diff
- **Bug Fixes**
 - ◆ More than 300 bugs fixes since 4.1.2
