## High Luminosity

Except for a few exceptions, volume one will not contain tools and reconstruction procedures for high luminosity data samples. Therefore it is decided that the high luminosity discussion in the pTDR will be downscoped: there will be no systematic study of the high luminosity reach in vol2.3. However, it is noted that a few high luminosity analyses have been actively pursued and these will not be discarded. The inclusion in the pTDR of these analyses will be discussed on a case by case basis. Analyses done with the 2\*1033 pile up environment, up to a maximum of 60 fb-1 of integrated luminosity are not affected by this decision.
