# Upsilon Cuts

The cuts for the Upsilon->mu+mu- analysis need to be set to follow the polarization analysis (BPH-11-023, as defined in the analysis note AN2012-140[a](#)).

The function `xsReader::readCuts(TString filename, int dump)` is called by the analysis code to read a cut file specified by the user. A typical annotated cuts file is attached.

The attached postscript file, `cuts.ps` shows a histogram of the cuts. The cuts are applied before the best candidate is selected.
