Minutes 11 October 05 - testbed planing

Phone conference about 3D testing (11-Oct-2005)

Present:

Eva, Dirk (CERN), Gordon (Rutherford Lab), Stefan (Oxford)

Situation of test databases

Eva reported that she replicated the COOL structure to the test database. It is ready to use. Stefan asked whether the same would be possible for ATLASDD since this is currently the only way to test ATLAS software database access.

The same structure should then be replicated to Rutherford Lab (RAL)

Currently Stefan has problems with the compilation (scarm) of the COOL test jobs. Dirk will talk with Ioannis.

Hardware situation

Currently the system at RAL has 20GB database disk space. This should be sufficient for the first test phase.

Timeline

- the proposal for the Tier 1 production resources should be done by Nov
- March is proposed as first deployment date for the production setup

this schedule is a proposal; subject to discussion with experiments and sites at the workshop
