

## Recycle Bin automatic purging

- This script creates a job that automatically purges all objects (tables) in recycle bin that are older than 7 days (edit the default in the installation script if necessary)
- Job, by default, runs every day at 7 a.m.

### Installaion

- connect to pdb-backup

```
$ cd ~/production/recyclebin  
$ sqlplus system@<db_name> @purge_old_recyclebin
```

- please ignore the error of dropping non-existing job

### Enabling/Disabling

- connect to the target database
- to disable automatic purging please execute the following command:

```
exec DBMS_SCHEDULER.DROP_JOB ('SYSTEM.PURGE_OLD_RECYCLEBIN_JOB', TRUE);
```

- to enable it (please set BYHOUR=... parameter to the hour the purging should start - important in streams environment to allow it to run first on the capture side and then after few hours on the apply side):

```
exec DBMS_SCHEDULER.CREATE_JOB ('SYSTEM.PURGE_OLD_RECYCLEBIN_JOB', 'PLSQL_BLOCK', 'PURGE_OLD_RECYCLEBIN')
```
