

## PSSGroup Web Preferences

The following settings are *web preferences* of the PSSGroup web. These preferences overwrite the *site-level preferences* in TWikiPreferences, and can be overwritten by *user preferences* (your personal topic, eg: TWikiGuest in the Main web).

- Set BROADCASTMESSAGE =

**WARNING: This web is not used anymore. Please use PDBService.WebPreferences instead!**

### Preferences:

- List of topics of the TWiki.PSSGroup web:
  - ◆ Set WEBTOPICLIST = PhysicsDatabases | | Changes | Index | Search | Go
- Web specific background color: (Pick a lighter one of the StandardColors)
  - ◆ Set WEBBGCOLOR = #FFCC00
- List this web in the SiteMap:
  - ◆ If yes, set SITEMAPLIST to on, do not set NOSEARCHALL, and add the "what" and "use to..." description for the site map. Make sure to list only links that include the name of the web, e.g. PSSGroup.Topic links.

*NB NB! IF you apply access restrictions, remove the "on" for the sitemap flag (SITEMAPLIST =)*

- - ◆ Set SITEMAPLIST =
  - ◆ Set SITEMAPWHAT = Physics Support and Services
  - ◆ Set SITEMAPUSETO = ...collaborate on Physics Support and Services
- Exclude web from a `web="all"` search: (Set to on for hidden webs)
  - ◆ Set NOSEARCHALL =
- Prevent automatic linking of WikiWords and acronyms (if set to on); link WikiWords (if empty); can be overwritten by web preferences:
  - ◆ Set NOAUTOLINK =
  - ◆ **Note:** Use the `[[...]][...]` syntax to link topics in case you disabled WikiWord linking. The `<noautolink> ... </noautolink>` syntax can be used to prevent links within a block of text.
- Default template for new topics and form(s) for this web:
  - ◆ WebTopicEditTemplate: Default template for new topics in this web. (Site-level is used if topic does not exist)
  - ◆ TWiki.WebTopicEditTemplate: Site-level default template
  - ◆ TWikiForms: How to enable form(s)
  - ◆ Set WEBFORMS =
- Users or groups who *are not / are* allowed to *view / change / rename* topics in the PSSGroup web: (See TWikiAccessControl)

*NB NB NB: If you apply access restrictions, you MUST remove the web from the sitemap (see above)*

- - ◆ Set DENYWEBVIEW =

- ◆ Set ALLOWWEBVIEW =
- ◆ Set DENYWEBCHANGE = TWikiGuest
- ◆ Set ALLOWWEBCHANGE = TWikiAdminGroup, PrzemyslawRadowiecki
- ◆ Set DENYWEBRENAME = TWikiGuest
- ◆ Set ALLOWWEBRENAME = TWikiAdminGroup, PrzemyslawRadowiecki
  
- Users or groups allowed to change or rename this WebPreferences topic: (I.e. TWikiAdminGroup)
  - ◆ Set ALLOWTOPICCHANGE = TWikiAdminGroup, PrzemyslawRadowiecki
  - ◆ Set ALLOWTOPICRENAME = TWikiAdminGroup, PrzemyslawRadowiecki
  
- Web preferences that are **not** allowed to be overridden by user preferences:
  - ◆ Set FINALPREFERENCES = NOSEARCHALL, ATTACHFILESIZELIMIT, WIKIWEBMASTER, WEBCOPYRIGHT, WEBTOPICLIST, DENYWEBVIEW, ALLOWWEBVIEW, DENYWEBCHANGE, ALLOWWEBCHANGE, DENYWEBRENAME, ALLOWWEBRENAME

### Notes:

- A preference is defined as:  
6 spaces \* Set NAME = value  
Example:
  - ◆ Set WEBBGCOLOR = #FFFFC0
- Preferences are used as TWikiVariables by enclosing the name in percent signs. Example:
  - ◆ When you write variable %WEBBGCOLOR% , it gets expanded to #FFCC00 .
- The sequential order of the preference settings is significant. Define preferences that use other preferences first, i.e. set WEBCOPYRIGHT before WIKIWEBMASTER since %WEBCOPYRIGHT% uses the %WIKIWEBMASTER% variable.
- You can introduce new preferences variables and use them in your topics and templates. There is no need to change the TWiki engine (Perl scripts).

### Related Topics:

- TWikiPreferences has site-level preferences.
- TWikiUsers has a list of user topics. User topics can have optional user preferences.
- TWikiVariables has a list of common %VARIABLES%.
- TWikiAccessControl explains how to restrict access by users or groups.

## Help on Preferences

- A preference setting is defined by:  
3 or 6 spaces \* Set NAME = value  
Example:
  - ◆ Set WEBBGCOLOR = #FFFFC0
- A preferences setting can be disabled with a # sign. Remove the # sign to enable a local customisation. Example:
  - ◆ #Set DENYWEBCHANGE = UnknownUser
- Preferences are used as TWikiVariables by enclosing the name in percent signs. Example:
  - ◆ When you write variable %WEBBGCOLOR% , it gets expanded to #FFCC00
- The sequential order of the preference settings is significant. Define preferences that use other preferences first, i.e. set WEBCOPYRIGHT before WIKIWEBMASTER since %WEBCOPYRIGHT% uses the %WIKIWEBMASTER% variable.
- You can introduce your own preferences variables and use them in your topics and templates.

## Related Topics

- TWiki.TWikiPreferences, Main.TWikiPreferences - site-level preferences
- UserList - list of user topics. User topics can have optional user preferences
- TWikiVariables - list of common %VARIABLES%
- TWikiAccessControl - explains how to restrict access by users or groups

## Tools

-  **Rename, move or delete this web:**
    - ◆ **Rename/move/delete web...**, looking for references in *all public webs*. See also: [ManagingWebs](#)
