PandaClient

The Panda client module provides a simple, lightweight python interface for submitting jobs to Panda, query job status and controlling jobs in the system. It has no dependencies on middleware or communication protocols other than http (it uses curl). It is independent of grid flavor. A grid certificate is required in order to submit jobs.

Interaction of the client with the Panda server is as follows:

Usage

Client interface code is in the Client [in the repository](#).

Usage examples are in the test [area](#).

API documentation

API documentation is available at this page [in the repository](#).
