PandaMonitor

The Panda monitor provides a web browser interface to the Panda system: dashboard overviews of its operation; jobs and tasks; error summaries with drill-down to diagnose problems; active users and user 'my Panda' pages; site, cloud and worker node information; production statistics, etc. The monitor in its latest version is implemented with Django, running in Apache, in front of either of the two database implementations of PanDA, Oracle or MySQL.

Web Interface to

The web interface for the monitor is [here](#). The monitor also supports programmatic use with json downloads for many of its pages. Monitor help is documented internally; see the green menu at right. A related Panda component is PandaLogger.

https for

Starting from 17th of July 2017 BigPanda [↗](#)

webUI will be accessible only through Single Sign-On (https).

the REST API (JSON curl) won't be affected.

https: technical details

Sergey write here few sentences.

https: contacts in case of problems

In case of problems please contact atlas-adc-pandamon-support AT cern.ch
