Inter-Wiki Link Rules (or Links to other Sites)

This topic lists all aliases needed to map Inter-Site links to external wikis/sites.

Whenever you write `ExternalSite:Page` it will be linked automatically to the page on the external site. The link points to the URL corresponding to the `ExternalSite` alias below, concatenated to the `Page` you choose. Example: Type `Wiki:RecentChanges` to get Wiki:RecentChanges, the RecentChanges page at the original Wiki site.

How to define Inter-Site links

- Inter-Site links are defined in the tables below.
- Each entry must be of format:
  ```plaintext
  | External site alias | URL | Tooltip help text |
  ```
- The Alias must start with an upper case letter and may contain alphanumeric letters.
- The URL and Tooltip Text may contain optional `$page` variables; the variable gets expanded to the page name.
- **Note:** The Tooltip Text must not contain any HTML tags (including `<nop>` escape code), no internal WikiWord links, and no external links. Hint: Escape `WikiWords` and `$page`.

General and CERN inter wikis

General inter-site and inter-wiki links and CERN global inter-wiki links are defined on TWiki.InterWikis.

### Persistence inter wikis

<table>
<thead>
<tr>
<th>Alias</th>
<th>URL</th>
<th>Tooltip Text</th>
</tr>
</thead>
<tbody>
<tr>
<td>CORALCOOL</td>
<td><a href="https://sft.its.cern.ch/jira/browse/CORALCOOL-">https://sft.its.cern.ch/jira/browse/CORALCOOL-</a></td>
<td>Jira ticket CORALCOOL-$page</td>
</tr>
<tr>
<td>SPI</td>
<td><a href="https://sft.its.cern.ch/jira/browse/SPI-">https://sft.its.cern.ch/jira/browse/SPI-</a></td>
<td>Jira ticket SPI-$page</td>
</tr>
<tr>
<td>ROOT</td>
<td><a href="https://sft.its.cern.ch/jira/browse/ROOT-">https://sft.its.cern.ch/jira/browse/ROOT-</a></td>
<td>Jira ticket ROOT-$page</td>
</tr>
</tbody>
</table>
