## Minutes of the LIM meeting, Dec 01, 2005

Present: Emil Obreshkov (ATLAS), Florence Ranjard (LHCb), Vasily Kabachenko (ATLAS), Shahzad Muzaffar (CMS), Andreas Pfeiffer (SPI)

Apologies: David Quarrie (ATLAS)

Actions:

---

Based on the configuration LCG\_39, a new round of releases was build: SEAL 1.7.7, Persistency 1.0.0, POOL 2.2.5, PI 1.3.10. COOL 1.2.7 was not build due to some problems with the Persistency release.

The individual tarballs for the GENSER\_1\_2\_0 release are now available from the external/distributions AFS space.

New issues:

---

A new release of savannah with some bugfixes will be introduced Dec 2, 2005. A short downtime of the service is expected (planned for 10:00-12:00, hopefully shorter).

CMS asked the gccxml-config to report the patch level for the patched installations in externsl (and similar for other tools which have a config script).

CMS asked if there is a plan to migrate to scram V1. The very limited resources available in the projects make this difficult to impossible.

Atlas was asking if a version of cernlib is available for the AMD64/gcc344 platform.

Next meeting: Dec. 15, 11:00.

---

Action items:

new and outstanding:

- check status of DAWN/DAVID installation in external
  - tarballs for binaries for win32\_vc71 platform
  - check/validate the directory structure of all LCG AA projects (checkout and install area)
  - create "LCGAA" pseudo-package for lcg-installation-manager.py to download the binaries of a related set of releases in one go.
- 

Status of releases:

- see above.
-
