

F. Gerigk, S. Ramberger, M. Schuh, M. Jarosz, J. Borkowski,

## DTL

- Post couplers are delivered and tools are under preparation to shorten them
- Bead-Pulling measurements done.
  - ◆ no day by day frequency change observed
  - ◆ string exchanged to nylon string -> background noise's level is more constant
  - ◆ bigger bead used - > results have to be corrected for this

## Power Splitter - Magic T

- Role of middle part shapes analyzed by varying their position, height and diameter

## HOM

- More detailed simulations on chopped beam - no show stopper found
